Compendium des Duels

Synthèse des combats par unité — 27 armées, 896 unités

Registre établi le 12/07/2026

Méthode : chaque unité attaquante (héros inclus) a été confrontée en duel d'un round à toutes les unités des autres armées — dégât espéré, sans renforcement, contre l'ensemble du méta (896 unités). Pour chaque unité sont calculés : le ROI moyen (retour sur investissement en points), les points nets moyens, la médiane du ROI, le pourcentage de duels rentables, ainsi que le ROI minimum et maximum observés.

Pts net = valeur en points détruite chez l'adversaire – valeur en points perdue par l'attaquant (pondérée par les points de vie). **ROI** = pts net / coût en points de l'unité attaquante.

Deux scénarios sont détaillés dans ce registre : l'unité attaquante charge (+1 attaque en mêlée), ou aucune charge n'est portée. Les classements ci-après recensent **l'intégralité des 896 unités**, sans troncature.

> ***Précision méthodologique*** *— ces résultats ne proviennent ni d'un jet de dé unique, ni d'une moyenne empirique sur des combats simulés. Chaque duel est résolu par le calcul exact de l'espérance mathématique du dégât (probabilité de touche × blessure × sauvegarde/ward, en tenant compte des critiques), de façon entièrement déterministe : rejouer un même duel donne toujours rigoureusement le même résultat, sans variance ni tirage aléatoire.*

Scénario I — L'Assaut (attaquant chargé)

L'unité attaquante bénéficie du bonus de charge (+1 attaque en mêlée) ; le défenseur ne charge pas.

896 unités classées par ROI moyen décroissant — liste complète (aucune coupe).
